## Overview

ESI - eMite is a software platform that allows you to bring all your existing IT services and business systems into a single, flexible Dashboard(s) and reporting system without the pain of costly systems integration. Those Dashboards provide you with pinpoint accuracy to root cause, impacts to relationship dependencies - insight into what is happening, what did happen and what will happen across your IT estate from both a business and IT perspective. This allows you to understand current events of your IT services and business systems present them in a way that makes sense to your end users - customers and fine tune those systems and services over time.

## The ESI - eMite Advantage

**ESI - eMite delivers** a real-time dynamic capability, for business and technology management, that delivers visibility and insight into business operations. **ESI - eMite** easily obtains Real Time data by interfacing to any part (files, systems, monitoring tools...) of your infrastructure that contains vital metrics to deliver real-time, actionable information. This real time information can be acted upon in a variety of ways - alerts can be sent, critical decisions can be made, impacted processes or relationships can be identified and action plans can be mapped, using real-time flexible view dynamic dashboards. Users are provided numerous "roll based" individualized views and "root cause" drill down capabilities based on their specific function and responsibilities and permissions - real time.

**ESI - eMite** places complete information at your fingertips, enabling smarter decisions to maximize response and minimize impact Real Time. By correlating a wide variety of events and data from both streaming feeds and historical data silos, **ESI - eMite** helps organizations gain real-time visibility of information, from root cause to relationships through advanced visualization capabilities. Companies have real-time insight into business performance, health and status so that immediate action based on business policies and processes can be taken. **ESI - eMite** delivers the benefits of real-time collection, correlation, analysis, alerts, and actions to a broad spectrum of use cases, users and management - **Real Time**.
